Hiring Manager

Vortexa Quantitative Solutions

London, UK

RE: Quantitative Systems Developer Application

Dear Hiring Manager,

I am writing to express my strong interest in the Quantitative Systems Developer position at Vortexa Quantitative Solutions. Having built high-throughput execution pipelines and ultra-low-latency C++ components at Aetheris Financial Technologies and \$\$-@@ Inc., I am eager to apply my experience in low-latency system architecture and financial infrastructure to your team.

During my time at Aetheris Financial Technologies, I focused on optimizing low-latency market data processors and execution pipelines using C++20. A key achievement was redesigning our core data parser to cut tick-to-trade latency by 18%, while implementing lock-free data structures to maintain stability during peak market volatility. Prior to this, my work at \$\$-@@ Inc. provided me with direct experience in FIX protocol integration and building real-time risk calculation systems for high-frequency trading platforms.

Vortexa's focus on automated market-making and ultra-low-latency trading infrastructure aligns directly with my technical strengths in C++ system design, memory profiling, and network optimization. I am particularly excited about the opportunity to bridge quantitative models and production execution engines to drive maximum system performance.

Thank you for your time and consideration. I welcome the opportunity to discuss how my technical background and performance-driven approach can contribute to Vortexa Quantitative Solutions.

Sincerely,

Jake Zionson
